

ABSTRACT OF THE DISCLOSURE

A SYSTEM AND METHOD FOR CONTROLLING ACCESS IN AN
INTERACTIVE GRID ENVIRONMENT

5

A system and method for controlling access in an interactive grid environment is disclosed. Embodiments of the present invention include a method for controlling remote desktop access provided by an interactive grid computing system comprising determining user policies based on a classification of a user and providing a dynamic
10 user account to the user, wherein the dynamic user account is customized based on the user policies to limit access to resources accessible through a remote desktop.
